EXECUTIVE SUMMARY

Senior Frontend Engineer and Frontend Tech Lead with 9+ years of experience building scalable, high-performance web applications and leading frontend development across complex products and cross-functional teams. Core expertise lies in Angular, TypeScript, RxJS, Signals, Nx monorepos, Micro Frontends, and component-driven architecture. Passionate about solving complex engineering problems—from designing modular frontend systems and reusable UI libraries to improving application performance, developer experience, and code quality. Broad experience across the JavaScript ecosystem (React, Vue, Node.js, NestJS, Mobile frameworks) and modern engineering practices including Cypress, Playwright, CI/CD, Docker, and AI-powered product automation. Focuses on technical decision-making, mentoring developers, establishing engineering standards, and building scalable systems that span across multiple products and teams.

CORE TECHNOLOGIES

Frontend & Architecture: Angular, TypeScript, JavaScript (ES6+), RxJS, NgRx, Signals, SignalStore, Nx Monorepos, Micro Frontends, Component-Driven Development, Design Systems

UI & Styles: PrimeNG, AG Grid Enterprise, Angular Material, Tailwind CSS, Sass/CSS3, HTML5, Bootstrap

Broad Ecosystem: React, Vue.js, Node.js, NestJS, GraphQL, REST APIs, Ionic, React Native, Flutter

Testing, Tooling & DevOps: Cypress, Playwright, Unit Testing, Storybook, Git, Docker, CI/CD, Agile/Scrum

AI & Automation: AI-powered applications, Cursor, Claude, GitHub Copilot, AI workflow automation

PROFESSIONAL EXPERIENCE

Netsync — Frontend Tech Lead / Senior Frontend Engineer

Jun 2023 – Present

Boston, United States (Remote) | Acting as FE Tech Lead since Jun 2025

- Act as Frontend Tech Lead, taking technical ownership of frontend architecture, engineering standards, and technical decision-making across product delivery teams while directly managing a team of 6 frontend developers.
- Lead end-to-end delivery lifecycles from requirement breakdown and solution design through code reviews, implementation, and deployment.
- Architect and drive the implementation of Micro Frontends and Nx monorepos to structure scalable, maintainable enterprise applications.
- Design reusable Design Systems and shared component libraries (e.g., dynamic forms, timeline UI primitives, enterprise grids) to ensure UX consistency and accelerate cross-team feature delivery.
- Mentor engineers, establish coding standards, and improve application performance, developer experience, and overall code quality.
- Architect Signal / SignalStore state management alongside RxJS/NgRx, enforcing feature-scoped stores, request deduplication, and designing API caching strategies for dropdown/reference data to eliminate unnecessary component lifecycle re-fetching.
- Troubleshoot complex Nx dependency/build/lint issues, diagnose Node.js heap/memory limitations in large builds, configure SSR/disable SSR where required, set up Docker + Nginx deployments, resolve Cloud Run Mixed Content issues, and manage multi-backend endpoint environments.
- Integrate Claude, Cursor, and GitHub Copilot into daily engineering workflows for implementation, refactoring, debugging, test generation, and architecture exploration while upholding strict quality standards.

Geidea — Senior Frontend Developer

Sep 2022 – Aug 2023

Riyadh, Saudi Arabia

- Contributed to an enterprise Point of Sale (POS) platform built with Angular, NgRx, and Micro Frontends within a modular frontend architecture.
- Developed complex transactional business workflows and reusable frontend components while maintaining clear feature domain boundaries.
- Optimized application state management and rendering performance across large-scale POS workflows.
- Participated in end-to-end feature delivery across requirement analysis, development, testing, and release within Agile teams.

Softec Technologies — Senior Frontend Developer

Mar 2022 – Sep 2022

Maadi, Cairo, Egypt

- Owned frontend feature implementation from functional requirements through release for data-intensive logistics and transport management applications.
- Utilized Angular Material, modern CSS, and responsive UI patterns to deliver accessible and maintainable user interfaces.
- Collaborated with cross-functional product teams to solve technical bottlenecks and improve overall application usability.

ITWORX Education — Frontend Developer

Apr 2021 – Mar 2022

Nasr City, Cairo, Egypt

- Contributed to WinjiGo, a Learning Management System (LMS) serving the UAE Ministry of Education.
- Developed student, parent, and examination management portals using Angular, AngularJS, and ASP.NET Core.
- Participated actively in end-to-end feature development, code reviews, and sprint planning in Agile setups.

MEITS Technology — Frontend Developer

Apr 2019 – Mar 2021

Maadi, Cairo, Egypt

- Developed responsive web and hybrid mobile applications using Ionic and Angular Material with a focus on usability and performance.
- Translated business logic and UI/UX designs into production-ready frontend code within Agile delivery teams.

Capital Link Globe (CLG) — Frontend Developer

Jan 2016 – Jan 2018

Cairo, Egypt

- Built user-facing web applications and maintained frontend features according to client functional requirements.

SELECTED PROJECTS & IMPACT

Alto NX Platform

- Architected Nx Monorepo for multiple Angular apps with shared libraries for UI, utilities, and core business logic.
- Established Design System with PrimeNG, Tailwind CSS, AG Grid Enterprise, and Storybook documentation.
- Leveraged modern Angular architecture (Standalone Components, OnPush, Signals / SignalStore, GraphQL, Docker, Husky).
- Handled Angular version modernizations and migration challenges while maintaining build stability.

Alto / Designer / Signage — Multi-Application Architecture

- Designed multi-app integration across Alto, Designer, and Signage platforms while preserving backend/data boundaries.
- Engineered multi-environment launching, enabling the same application version to run seamlessly across distinct products and API environments.

Frontend Design System & Shared Libraries

- Built standardized UI foundations, PrimeNG wrappers, dynamic ControlValueAccessor form components, and custom Timelines.
- Implemented reusable table/data-grid patterns with server-side pagination and filtering backed by Storybook workflows.

Olympus Enterprise Frontend Platform

- Developed complex enterprise UI workflows for Timelines, Floors, and structured data visualization with scalable state management.
- Engineered reusable Timeline and Floor management components supporting multi-context business interactions across screens.

Meqati

- Developed cross-platform mobile application for Hajj and Umrah transportation and schedules management.
- Engineered responsive interfaces and offline-ready features using Ionic framework and Angular.

Health Heroes

- Built cross-platform application for health management and Ministry services tracking.
- Delivered seamless user experience across iOS and Android using Ionic and Angular architecture.

Geidea POS: Enterprise Point of Sale platform with real-time reporting and transaction tracking (Angular, Micro Frontends, .NET Core).

WinjiGo LMS: UAE Ministry of Education Learning Management System covering students, parents, and examinations (Angular, AngularJS, ASP.NET Core).

Peaxy Battery Intelligence: Cloud analytics platform capturing and analyzing battery lifecycle data.

EDUCATION

Bachelor's Degree in Computer Science — Zagazig University | 2013 – 2017

CERTIFICATIONS, COURSES & LEARNING

- **Master RxJS:** Udemy Certified (Dec 2022) — Credential ID: UC-5e97cc81-a4b1-4ef3-890a-02315c4880bb
- **RxJS Certification:** TestDome Certified (Dec 2022) — Advanced Reactive Programming & Asynchronous Data Streams
- **AI & Engineering Automation:** Prompt Engineering, Modern AI Workflows & LLM Integration — Udemy
- **Agile & Project Management:** Agile Software Development, Scrum Master & Modern Delivery Practices — Udemy
- **Advanced Frontend Architecture:** Modern Angular Architecture, State Management & Micro Frontends — Udemy
